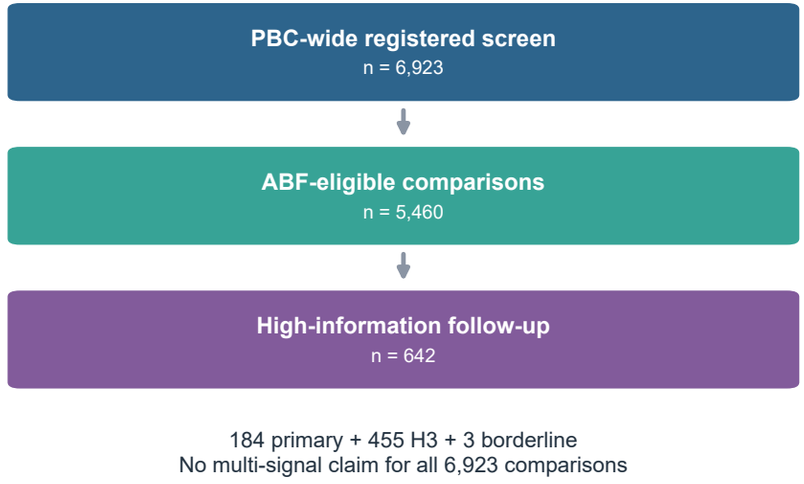
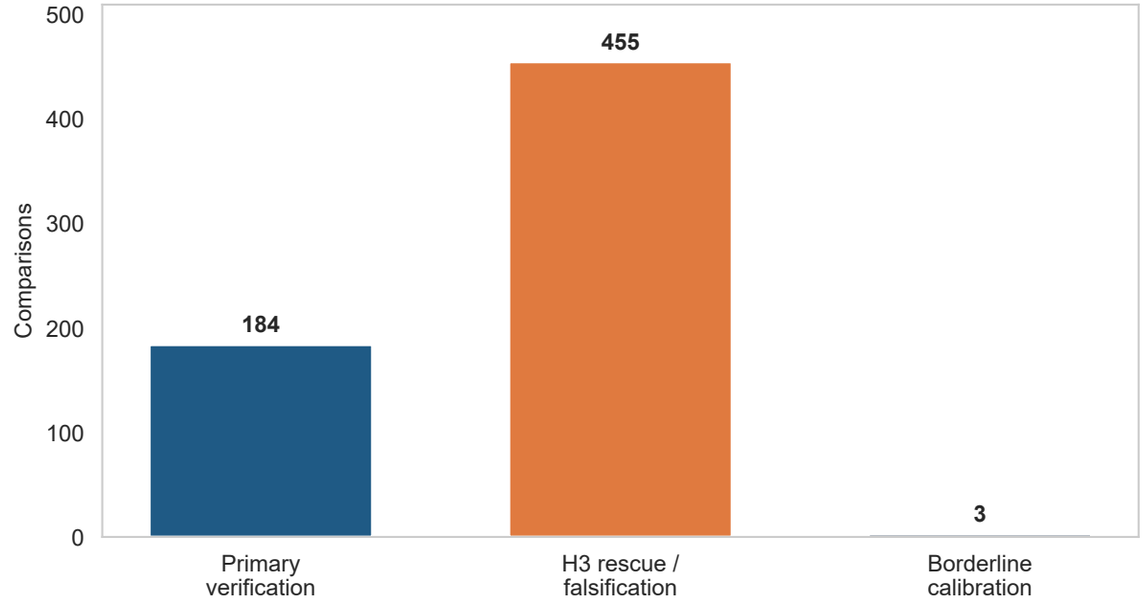
Study scope, bounded follow-up and model-integrity gates

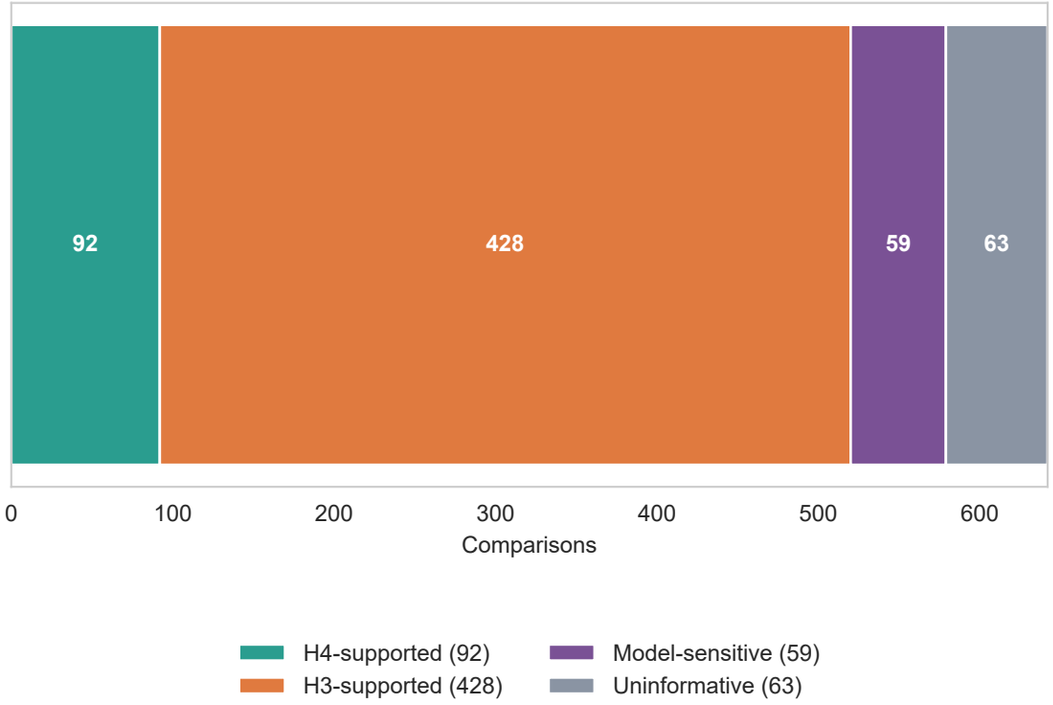
a) Analysis scope and direction of follow-up



b) Prespecified roles within the 642-comparison subset



c) Frozen PF10 multi-signal outcomes



d) Model identity and diagnostic closure

Audit denominators describe different tasks

14 / 14 comparison–model identity rows

7 targeted comparisons × PF10/PF50; not 14 cell types

2,568 / 2,568 expanded diagnostic units

642 comparisons × 2 models × 2 traits

One unique event outside credible sets was reviewed and retained
