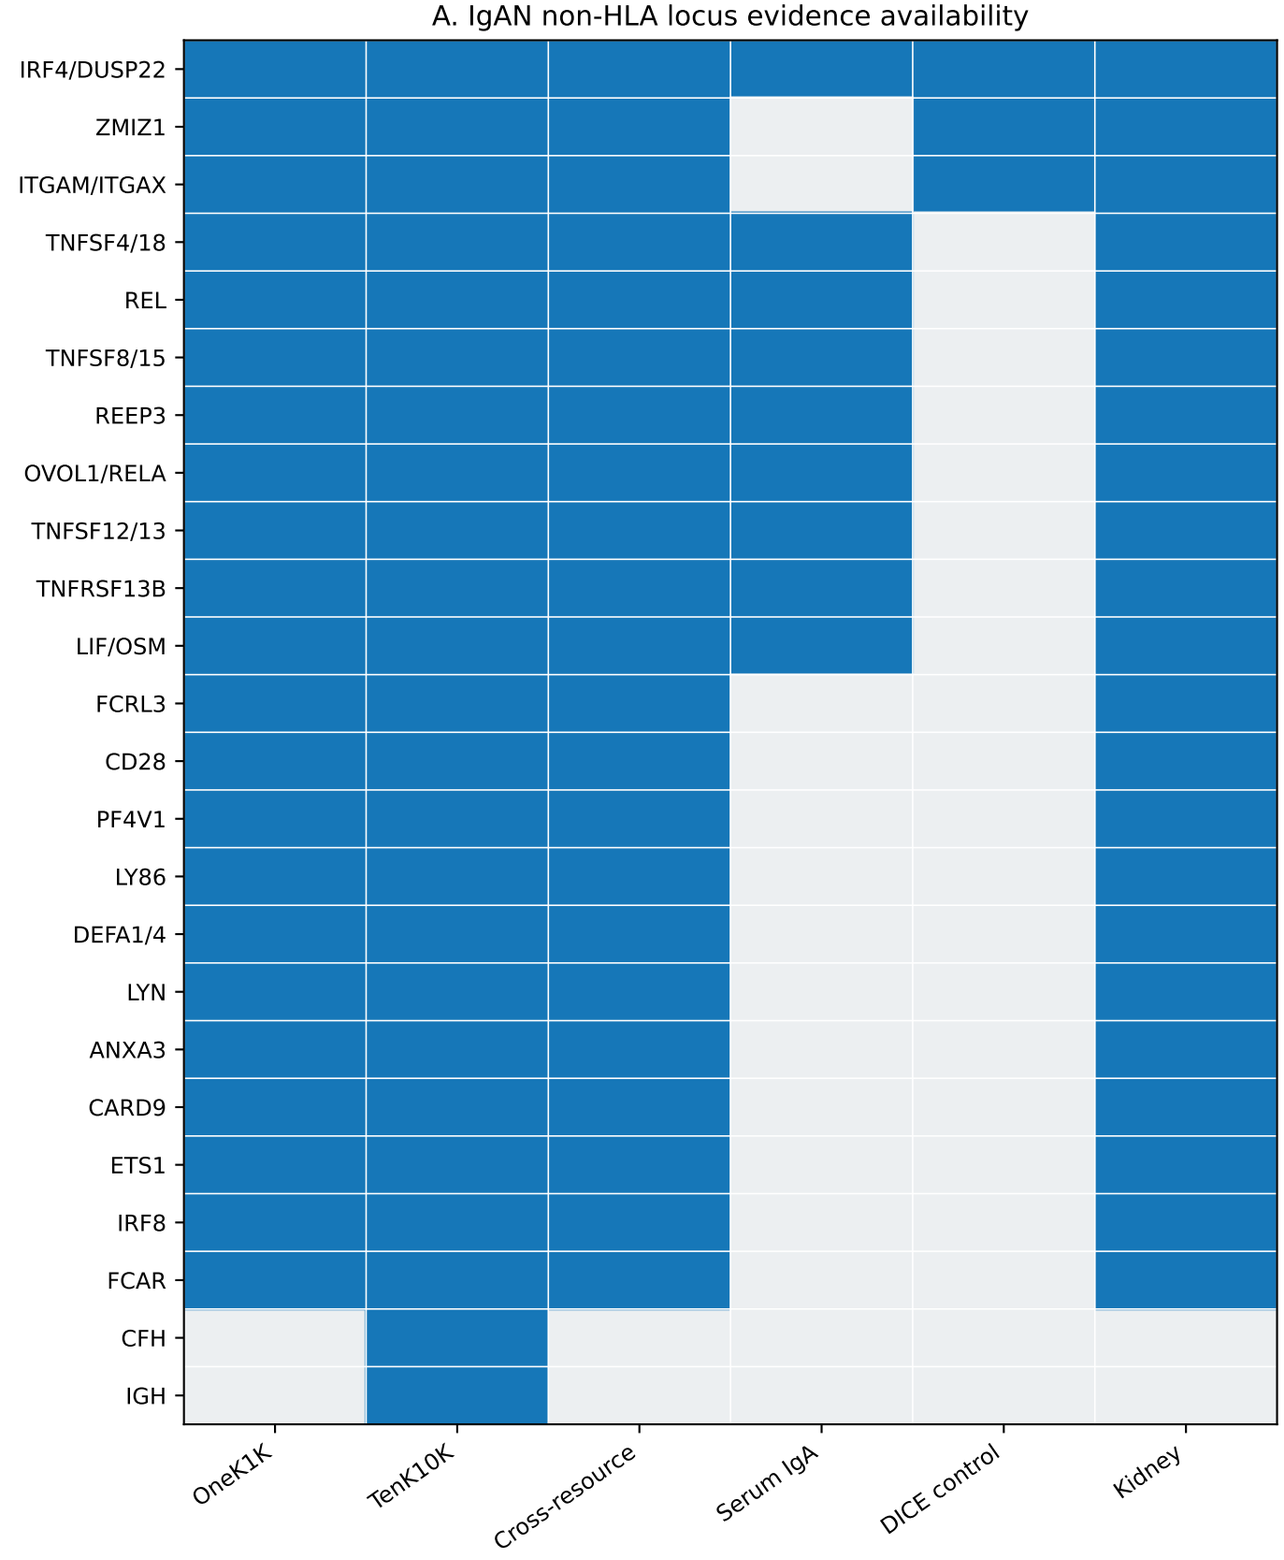
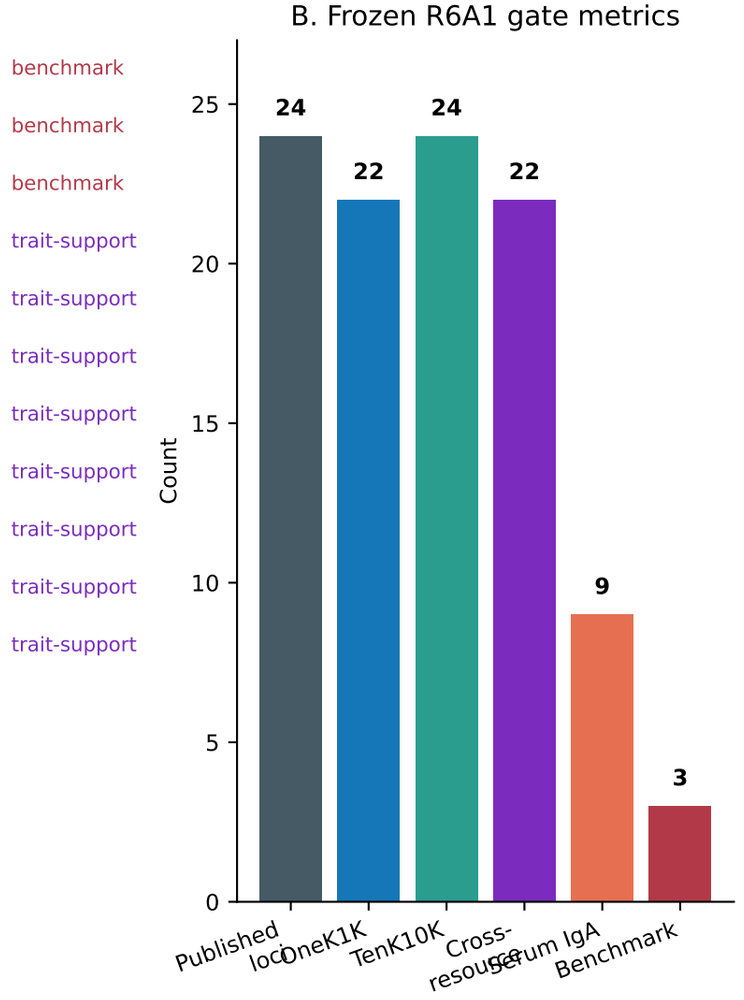
R6A1 — IgAN byte-level and positive-evidence preflight





R6A1 decision: GO to R6A2

GSE127136: 145/146 cross-resource genes detected
Published DICE controls recovered in both QTL resources:
IRF4, DUSP22, ZMIZ1, ITGAX

Boundary: availability and screening evidence only.
New shared-signal claims require R6A2 colocalization.
