Supplementary Information and source data guide

Article: Input matched multisignal colocalization clarifies regulatory assignments at primary biliary cholangitis loci

Authors: Zhi Chen and Teng Qi

This guide defines the supplementary upload set and the evidentiary role of every file. Machine-readable source data are supplied separately so that large tables remain reusable rather than being rasterized into a PDF.

Supplementary upload set

- **Supplementary Data 1:** `Supplementary_Data_1_Tables_S1-S10.xlsx` contains the editable reading interface for Supplementary Tables S1-S10.
- **Source Data 1:** `Source_Data_1_Primary_Machine_Readable_Data.zip` contains primary machine-readable TSV, TSV.GZ and JSON tables, a README and SHA-256 manifest.
- **Source Data 2:** `Source_Data_2_External_Validation_Data.zip` contains FinnGen disease credible-set, FinnGen R13 x OneK1K, CASCADE, chromatin-triangle, OMIX boundary and source-ledger tables with an internal SHA-256 manifest.

Supplementary table map

Supplementary Table S1

Data sources, versions, accessions, checksums and redistribution status.

Supplementary Table S2

Complete 6,923-comparison screening registry and the 5,460 ABF-eligible subset.

Supplementary Table S3

Frozen 642-comparison roles, A0/A1/A2/M trajectories and categorical states.

Supplementary Table S4

Support-set membership and identity audit, including removed-variant counts and hashes.

Supplementary Table S5

Source-matched PF10/PF50 LD and SuSiE quality-control metrics.

Supplementary Table S6

Signal-pair posterior results, cross-L identity and mixed H4/H3 semantics.

Supplementary Table S7

Simulation grid, iteration-level outcome channels and scenario summaries, including the compressed 486,000-row audit.

Supplementary Table S8

TenK10K and FinnGen external molecular-QTL records and allele-direction mappings.

Supplementary Table S9

Donor-level liver target-panel metrics, exact tests and sensitivity analyses.

Supplementary Table S10

Claim-evidence ledger and Methods-Results mirror.

Supplementary Table S11

IL12RB2-NK external disease-study validation, source credible-set audit, CASCADE coverage, chromatin-triangle adjudication and OMIX descriptive boundary. These records are supplied in Source Data 2.

Redistribution boundary

Individual-level genotype data, BAM files, pseudobulk matrices and third-party source archives are not redistributed. Source accessions, versions and access conditions are recorded in Supplementary Table S1 and the machine-readable source ledger.
